## STREAMBOX AUGUST 2022

### QUICK START

Open the streambox and unpack with care.

Complete any hardware assembly needed (see Manual for detailed instructions).

Insert a SIM card in the dongle / modem by sliding off the cover and replacing.

Plug the power adapter into a mains socket OR connect the battery using the USB-A to Micro USB cable.

The streambox streams, appearing on the soundmap and server list (see reverse).

### IMPORTANT

**\*\*Please also consult detailed instructions, especially safety and privacy of the installation.\*\***

**\*\*The streambox relays environmental sounds in real time to a live online soundmap, operated by Locus Sonus at ESAAIX, Aix-Marseille. It sends a high quality stereo signal to a public server, where anyone can listen to it. The streams are not routinely recorded; but there is nothing to prevent them being recorded. This should be kept in mind when choosing a site.\*\***

**\*\*Bear in mind issues of privacy and safety.\*\***

**\*\* It is important to consider if the real location could / should be revealed. Consider placing the microphone icon over an uninhabited area. A note can be made in the stream description from the admin page to give a more accurate sense of the site, without listing the exact location of the device.\*\***
